Getting Started

Last modified: May 2, 2010 - 22:15

Welcome to Drupal! Drupal is a powerful content management system, meaning you can power many different types of websites with it without knowing any coding languages.

If you're new to Drupal or having your own website, then this guide is for you.

The following pages should introduce you to the Drupal project, some best practices the community has accumulated and basic installation and configuration.

The Drupal documentation is currently being restructured. Some content has been moved to the [Administration Guide](#), [Structure Guide](#) and [Site Building Guide](#).

If you need help installing Drupal, the [Installation Guide](#) has step by step instructions and troubleshooting tips.

Account information

Username: *

Spaces are allowed; punctuation is not allowed except for periods, hyphens, and underscores.

E-mail address: *

A valid e-mail address. All e-mails from the system will be sent to this address. The e-mail address is not made public and will only be used if you wish to receive a new password or wish to receive certain news or notifications by e-mail.

Password: *

Confirm password: *

Provide a password for the new account in both fields.

Status:

- Blocked
 Active

Roles:

- authenticated user
 site_admin
 staff_office
 staff_teacher
 Notify user of new account

Roles

Roles allow you to fine tune the security and administration of Drupal. A role defines a group of users that have certain privileges as defined in **user permissions**. Examples of roles include: anonymous user, authenticated user, moderator, administrator and so on. In this area you will define the *role names* of the various roles. To delete a role choose "edit".

By default, Drupal comes with two user roles:

- Anonymous user: this role is used for users that don't have a user account or that are not authenticated.
- Authenticated user: this role is automatically granted to all logged in users.

Name	Operations
anonymous user	locked edit permissions
authenticated user	locked edit permissions
site_admin	edit role edit permissions
staff_office	edit role edit permissions
staff_teacher	edit role edit permissions

NewsFlash

[View](#) [CVS instructions](#)

roopletHEME - August 23, 2007 - 09:29

Themes

NewsFlash is the latest GPL theme by **RoopletHEME**. It features 7 color styles, 12 collapsible regions, suckerfish menus, fluid or fixed widths, built-in IE transparent PNG fix, and lots more. To see NewsFlash in action, take a look at the [NewsFlash demo site](#).

NewsFlash Version 1.6 is largely a ground-up rewrite of the theme. Numerous things have been added, changed, or fixed. Here's a summary of the major changes:

- **Drupal 6 Compatibility:** NewsFlash 0.16 is now available for Drupal versions 5.x and 6.x.
- **Pure CSS Tableless Design:** NewsFlash has been re-designed to use pure CSS for layout.
- **CSS and XHTML Valid:** NewsFlash 0.16 validates to XHTML and CSS specifications according to the W3C web standards.
- **4 New Color Schemes:** NewsFlash 0.16 includes four new color schemes: red, black, violet, and aqua.
- **Suckerfish Menus:** NewsFlash 0.16 has built-in support for drop-down suckerfish menus.
- **Themed Logo:** NewsFlash 0.16 supports separate logos for each available color style.
- **Selectible Font Family:** NewsFlash 0.16 allows you to select from several pre-defined Font Families, or to specify a custom Font Family.
- **Local Content CSS File:** NewsFlash 0.16 allows you to specify a CSS file local to your Drupal installation that will be included in the generated pages.
- **Configurable Sidebar Width:** NewsFlash 0.16 allows you to specify separate widths for each sidebar.
- **Configurable Logo Size:** NewsFlash 0.16 allows you to specify the logo image size for compatibility with the IE PNG fix.
- **New Handbook:** Complete instructions for installing and using NewsFlash 0.16 are available in the new NewsFlash Handbook.
- **Improved Text Display:** In addition to the new font family support, NewsFlash 0.16 provides improved line spacing for both Headings and Body elements. The use of the **bold** attribute has been reduced in many areas.

Blocks

List Add block

Picture Reloaded NewsFlash

This page provides a drag-and-drop interface for assigning a block to a region, and for controlling the order of blocks within regions. To change the region or order of a block, grab a drag-and-drop handle under the *Block* column and drag the block to a new location in the list. (Grab a handle by clicking and holding the mouse while hovering over a handle icon.) Since not all themes implement the same regions, or display regions in the same way, blocks are positioned on a per-theme basis. Remember that your changes will not be saved until you click the *Save blocks* button at the bottom of the page.

To reduce CPU usage, database traffic or bandwidth, blocks may be automatically disabled during high server loads by selecting their *Throttle* checkbox. Adjust throttle thresholds on the [throttle configuration page](#).

Click the *configure* link next to each block to configure its specific title and visibility settings. Use the *add block page* to create a custom block.
